

Data notice

LOCAL CONCEPT BUILD / 01 SEPTEMBER 2026

SUMMARY

This build is designed to run locally. The private brief form is a visual prototype and does not transmit the entered name or preferred contact to a server.

PREFERENCES

The interface may store local browser preferences needed for the experience, such as cookie-banner dismissal, sound state, or motion-related state. These values remain in the browser unless the user clears them.

MEDIA

Images, fonts, video, audio, scripts, and documents used by the Aster Vale experience are served from the local project. The six residence films do not rely on remote video hosts.

NO ANALYTICS CLAIM

This concept build does not intentionally configure analytics, advertising pixels, customer relationship management, payment processing, bookings, or profiling.

Controls and future changes

DATA HANDLING PRINCIPLES

YOUR CONTROLS

You can avoid entering information in the concept form, keep sound disabled, and clear the site's storage through browser settings. Closing the local browser session ends any unsaved interaction state.

IF PUBLISHED LATER

A real deployment would need a reviewed privacy notice that identifies the responsible entity, hosting providers, data destinations, retention periods, lawful bases, user rights, and a verified contact route.

SECURITY LIMIT

No local demonstration can promise absolute security. Do not enter sensitive, financial, identity, health, or confidential information into this prototype.

STATUS

This notice describes the supplied local Aster Vale concept build. It should be reviewed again if the site gains network services, analytics, a live form, accounts, payments, reservations, or other data processing.
